With regards to maintenance contracts the LCETB shall ensure that during works, arrangements are in place to monitor the Contractor for safe work practices specifically in connection with any risks, which may arise to staff, visitors or any other members of the public.

Coláiste Iósaef Community College will share its Ancillary Safety Statement with contractors and will seek the contractor's site specific statement appropriate to the working environment:

1. for their staff working on site and how they will provide for these requirements, and
2. how they will ensure the safety, health and welfare of the School and others affected by their activities

SECTION 3 – RISK ASSESSMENT, HAZARDS AND ACCIDENT PREVENTION

Risk Assessment

Risk means the likelihood that a specified undesired event will occur due to the realization of a hazard, or during work activities, or by the products and services created by work activities. A risk always has two elements; the likelihood that a hazard may occur and the consequences of the hazardous event. The number of people exposed as well as how often also determines the risk (HSA 2006)

Risk assessment is about identifying the hazards in the workplace that give rise to risk for staff and those affected by the activities of Coláiste Iósaef Community College. When we consider risks we need to consider our goals and what activities could occur (both positively and negatively) that would impact on these.

Once risks have been identified a formal assessment process should take place. Risks should be assessed on the **likelihood** of occurrence and the **impact** if they are to occur.

Risks are identified by staff, from expert reports, from expert writing on risks, from publications from experts on the subject of H & S, from accident / incident reports. Coláiste Iósaef Community College is aware that the failure to manage physical risks could undermine the achievement of our goals and objectives.

Hazards

A hazard means a source or a situation with the potential for harm in terms of human injury or ill health, damage to property, damage to the environment, or a combination of these (HSA 2006)

A hazard is defined as anything with the potential to cause harm. Hazards are grouped into 5 categories:

1. **Physical** - manual handling, working at height, equipment, slips, trips, falls, fire, electricity, housekeeping
2. **Health** - noise, dust, lighting, vibration, radiation, extremes of temperature, ergonomics
3. **Chemical** - substances that may be inhaled, absorbed or ingested
4. **Biological** - bacteria, viruses, fungi (yeasts and moulds) and parasites
5. **Psychosocial** - stress, violence to staff, bullying, passive smoking, sexual harassment, working hours

It is the duty of all those who have responsibility for resources, staff¹ and students to ensure hazards arising in the workplace which may give rise to risk for the safety, health and welfare of employees and those affected by Coláiste Iósaef Community College's activities are identified, assessed and eliminated or managed to the lowest level possible. (See Appendix IV).

¹ It is also the responsibility of all staff to co-operate with management in identifying hazards when asked to do so on an annual basis.

In ranking the hazards according to their risk potential, the risk is looked at before any controls are put in place and given a rating of high, medium or low based on the following criteria:

HIGH	–	Possibility of irreversible injury
MEDIUM	–	Possibility of reversible injury
LOW	–	Possibility of light injury

Where hazards cannot be removed, then controls will be recommended to reduce the risk to an acceptable level. Where funding for the control of a hazard is not available or is deferred then a schedule will be prepared to identify the timescale for implementation of the control.

Accident Prevention

“An **accident** is an incident plus its consequences; the end product of a sequence of events or actions resulting in an undesired consequence (injury, property damage, interruption, delay)”

“An **incident** is the sequence of events or actions leading up to the accident”.

Accidents can be prevented by applying active control measures as a result of any hazards identified and also by adhering to the general health and safety precautions.

Whether an accident actually occurs or a near miss occurs, it is essential that the accident be reported so that the risk involved can be rectified.

SECTION 4 – GENERAL ARRANGEMENTS
